
* Print a project, project item, Namespace, Class, Module, Method, Property, or code window. * Print complete project, project item, Namespace, Class, Module, Method, Property, or code window. * Export project to RTF or PDF format. * Export complete project, project item, Namespace, Class, Module, Method, Property, or code window to RTF or PDF format. * Generate custom paper size from predefined sizes (A4, A5, A6, Letter, or Legal) or custom sizes defined in the print dialog. * Print dialog supports landscape orientation and custom paper size for landscape orientation. * Page margins can be adjusted to your personal preferences. * Print paired statements using connecting lines. * Change page orientation to portrait and choose any custom paper size. * Header and footer fields are editable and can include Project name, Project version, Print date and time, and Page numbers. VSCodePrint is an add-in for Microsoft Visual Studio.NET that has been created to help you print your projects and code. It's designed to integrate well with the Visual Studio IDE, allowing you to export projects, items, classes, modules, methods and properties, among others to RTF or PDF formats and generate the desired report with the necessary headers and footers information. It is compatible with all the latest versions of Microsoft Visual Studio and you can use it to get started with code printing immediately, no matter what language you use. ProjectPlus is a popular application that allows you to easily and quickly manage your projects, including source code, databases, and all of the projects' files and resources. It enables you to create, manage, and monitor every aspect of your projects. Some of the many features included in ProjectPlus: * Import projects created by others * Synchronize with a network server * Organize project folders in the form of a tree * Export projects to HTML and XHTML formats * Extract resources from the projects and export to the disk * Set the project build type * Generate property sheets and class diagrams from all the projects * Allow you to use the source code files, resources, and settings of the project * Define the project build settings, including the build properties and project type * Create, open, and close projects * Generate project and solution files and project initialization information * Make projects, build them, and compile
